User List View Edit Flow:

01. User List View par edit ki link banai.

02. Link mein <a href="UserCtl?id=<%=bean.getId()%>">edit add kiya.

03. Request UserCtl par gayi, aur UserCtl ki doGet method call hui.

04. UserCtl par request parameter se id get ki.

05. operation get kiya, operation mila null.

06. Agar id > 0 && operation != null ho to UserModel ki findByPk method ko call kiya, jisne UserBean return kiya, aur use UserBean ke object bean mein hold kiya.

07. ServletUtility.setBean(bean, request); ko call kiya taaki ko request mein set kiya ja sake.
bean
08. ServletUtility.forward(getView(), request, response); se UserView.jsp par forward kiya.

09. UserView par <jsp:useBean id="bean" class="in.co.rays.bean.UserBean" scope="request"></jsp:useBean> se bean ko get kiya.

10. input fields me value attribute me <%=bean.getFirstName()%>,<%=bean.getLastName()%>.... kiya.
